Re: Renard Management, LLC  
Date: January 19, 2024

The Shade Tree Committee was very pleased to see that the revised landscape plan fulfills the requirement to plant 14 trees per acre.

We were also pleased to see that three of the large pin oaks are being saved. However, we noticed that a storm sewer near the southeast corner of the building will be constructed quite close to the trunk of the pin oak at that corner and suggest that a way be found to move the sewer farther from the trunk, if possible.

One other suggestion: If possible, additional understory trees and shrubs could be planted along the western wall of the smaller building to extend the existing hedgerow.
